

## First Human Implantation of a Bioresorbable Polymer Scaffold for Acute Traumatic Spinal Cord Injury: A Clinical Pilot Study for Safety and Feasibility

Published on July 18, 2016

**Lou Vaickus MD, FACP**  
Founder and President, akta Pharmaceutical Development™ (akta...)

While I enjoy being the Chief Executive Officer (CEO) of **aktaPD®**, with all the roles and responsibilities that position entails, first and foremost, I'm a physician, a scientist, and a drug development professional. In that world, it's vital to keep current with new ideas, discoveries, and accomplishments in the industry and to add value to those ventures. An exciting way to stay connected is by sharing landmark innovations with colleagues. I was honored with the opportunity to contribute to a case report recently published in the journal *Neurosurgery* about the first clinical implantation of **InVivo Therapeutics'** breakthrough - *a neuro-spinal scaffold for acute traumatic spinal cord injuries*.
